

The Innovation in Public Health Education project built on the Institute of Medicine (IOM) reports *The Future of the Public's Health in the 21st Century* and *Who Will Keep the Public Healthy? Educating Public Health Professionals for the 21st Century*. These reports recommend that all undergraduates have access to education in public health and encourage faculty development.

Funded through the APTR-CDC Cooperative Agreement, the project increased the design, teaching and evaluation of introductory undergraduate course work in public health and in epidemiology and to facilitate exchange of experience by faculty engaged in undergraduate public health teaching. The project also provided a formal opportunity for interactions between member institutions of the ATPM Council of Graduate Programs in Public Health that are currently providing undergraduate course work.

Funding was awarded to 13 institutions that taught and evaluated 8 public health and 6 epidemiology courses for undergraduates.

Awardees:

Arcadia University, Department of Medical Science and Community Health

- Brown University, Department of Community Health & Program in Public Health
- East Carolina University, Department of Health Education and Promotion College of Health and Human Performance
- Florida International University, Stempel School of Public Health
- Georgia State University, Institute of Public Health
